

Reconsideration Protocol

The NPSTC Governing Board voted unanimously on June 10, 2009, to endorse LTE as the favored technology standard most suited to the development of a nationwide interoperable broadband network in the U.S. 700 MHz public safety band. The vote will be final on July 1, 2009 unless one of the NPSTC Board members is convinced by another party before that date to bring the issue back before the entire Board for reconsideration. The contact information for the fifteen voting member organizations on the NPSTC Governing Board is listed at <http://www.npstc.org/memberorgs.jsp>. Any entity who wishes to request that the issue be revisited by the Board should provide their rationale for revisiting the decision to one or more of the voting members of the Governing Board by email.
